

Competenties halen dit semester

Management

Dit is mijn hoofdprofiel. Dit is must have dat ik dit semester moet kunnen aantonen.

Analyse

Analyzing multiple operational and tactical organizational processes, including the quality of associated data and current and future ICT provision

Analyzing the coherence of bottlenecks and cause-effect relationships

Determining ICT requirements based on the needs of relevant stakeholders

Advise

Advising coherent solutions for bottlenecks in organizational structure, process structure, and information provision

Advising on new ICT options, including package selection and advice

Design

Designing coherent organizational processes: functional organizational structure, process management, and information provision, taking into account security and privacy legislation

Designing interfaces for an application in the application landscape (mappings)

Realize

Realizing the introduction and acceptance of procedures in conjunction with new or modified information provision and governance

Generating and validating a proof of concept of an application

Setting up a standard application

Manage&Control

Setting up, maintaining, and updating (functional) management processes

Measuring and monitoring organizational processes using data

Identifying the change need of multiple operational and tactical organizational processes

Embedded Devices

Dit is mijn subdoel/ leuke als het lukt, als ik nog tijd over heb wil ik hieraan werken.

Analyse

Performing a requirements analysis for a (sub)system, including hardware and software, taking into account domain aspects and relevant quality attributes including security, safety, and sustainability

Performing a protocol analysis

Drafting an acceptance test for a system based on quality requirements

Advise

Providing technical advice on the architecture of a (part of a) system including hardware and software components, based on the requirements analysis

Advising on linking hardware systems and software components

Design

Methodically designing a (part of a) system based on requirements with self-selected hardware and software components

Integrating a hardware interface into an application (e.g. application driver software)

Realize

Realizing a designed (part of a) system and using software to realize connections with hardware components

Writing and testing designed (parts of) systems and hardware interfaces (e.g. application driver software)

Manage&Control

Assessing a given development environment based on quality requirements

Monitoring, reporting, and assessing a given test development environment
